

# 2021 IMPACT REPORT

YOU MAKE AN IMPACT: YOUR YEAR-END UPDATE FROM SINAI HEALTH

## HOW YOU'RE CHANGING THE WAY SINAI HEALTH OPERATES

Renew Sinai is the largest redevelopment project in Mount Sinai Hospital's history. The multi-year project is transforming and revitalizing many of our important facilities, including our Emergency Department and Intensive Care Unit, as well as our operating rooms. Thanks in large part to donor support, our operating rooms have recently been outfitted with leading-edge technology, elevating care for every patient who enters.

### YOUR SUPPORT TRANSFORMS THE PATIENT JOURNEY

You have helped advance our hospital's world-class surgical program to new levels of excellence. Thanks to donors like you, our surgical team has access to leading-edge technology, including advanced robotics. A new surgical robot, called the *da Vinci Xi*, allows our surgeons to operate with exceptional, almost superhuman, precision. This use of robotics enables minimally invasive surgeries, leading to shorter recovery times for patients, less pain and an earlier return to normal activities and quality of life. Furthermore, an operating suite with specialized software for viewing and manipulating images is also part of our new surgical floor. Guided Therapeutics – one of few surgical systems in Ontario for 3-D CT imaging – will provide our sarcoma patients with a more comfortable experience, quicker recoveries and better outcomes.

MOUNT SINAI HOSPITAL ANNUALLY

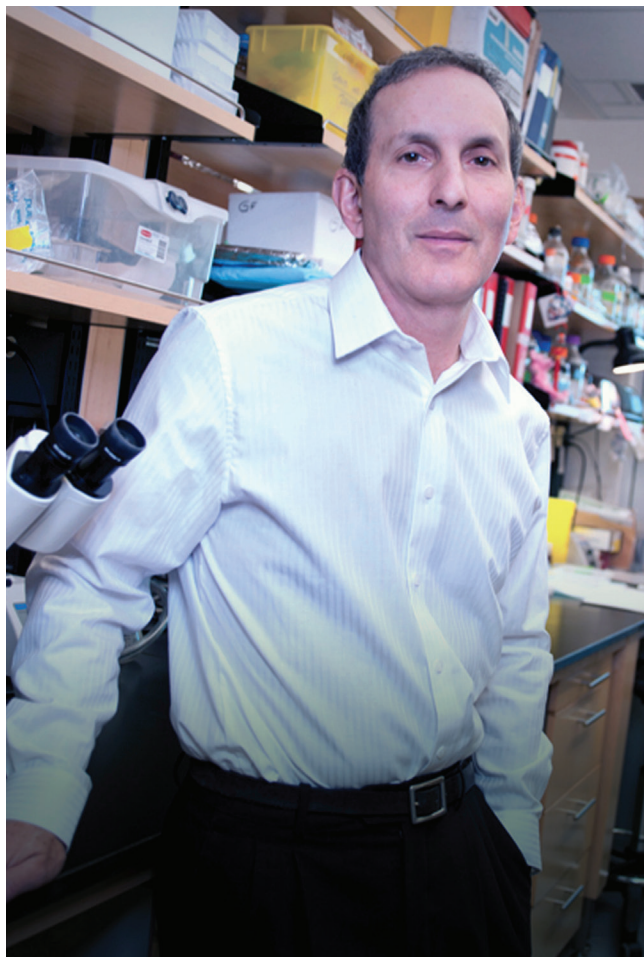

THANKS TO YOUR  
OUTPOURING OF SUPPORT,  
WE RAISED ALMOST

**\$44,000**

ON GIVING TUESDAY.

---

Buoyed by the support of the Koffler Foundation, which committed to matching Giving Tuesday gifts up to \$50,000, the response from our community was overwhelming. By the end of the day, we raised nearly \$44,000, enabling our newly launched **Social Accountability and Health Equity Initiative** to continue improving access to high-quality care for all members of our community, regardless of background or circumstances.

## CELEBRATING SINAI HEALTH EXCELLENCE

2021 was a big year for Dr. Daniel Drucker, a renowned senior investigator at the Lunenfeld-Tanenbaum Research Institute. In September, Dr. Drucker was inducted into the Canadian Medical Hall of Fame. Earlier in the year, he was awarded the 2021 Canada Gairdner International Award for research that has helped revolutionize treatments for type 2 diabetes, obesity, and intestinal disorders. Dr. Drucker's ongoing research is looking to uncover a greater understanding of type 2 diabetes. He aims to discover opportunities for drug development and new treatments for those living with the disease.

FUNDRAISING GOAL OF OVER

**\$250,000**

RAISED FOR COMMUNITY MENTAL  
HEALTH PROGRAMS.

---

Sinai Health's third Radiothon, held in June in partnership with Fairchild Radio, raised funds for our Community Mental Health Programs, serving the GTA's Chinese communities. These programs serve to meet the mental health needs of ethno-cultural communities by providing treatment and counselling, along with wellness outreach and education. The Radiothon broadcast was in both Mandarin and Cantonese, and featured inspirational stories from patients, staff, caregivers, volunteers and donors.
